I'm not sure how broadly this message was distributed, but please follow the link to see details about research continuity. There may be more guidance forthcoming soon, but the main message is that these matters need to be carefully discussed in each research group, since each group has slightly different issues. Please let me know if you have any questions or concerns.

Best Regards,
Jeff

Dear Colleagues:

This morning, all faculty, students and staff received a [communication from President DeGioia](#) announcing that all classes at the university will move to online instruction until further notice. Faculty and students have also received additional information about maintaining instructional continuity using our online learning resources.

Research inquiry is one of the core missions of our university. As the COVID-19 outbreak increasingly affects our daily academic lives, we must

balance the goal of maintaining continuity of our core research activities, while ensuring the health and safety of our faculty, students and staff as our highest priority. We provide [here](#) basic guidance and strategies for continuing necessary research activities and also, very importantly, for maintaining our research infrastructure and assets. These guidelines have been developed by our research leadership and faculty on the Main Campus and at the Medical Center.

We will continue to provide additional updates as the rapidly changing landscape of the COVID-19 outbreak evolves.

All our very best wishes,

Edward B. Heulton, Executive Vice President for Health Sciences and
Executive Dean of the School of Medicine

Robert M. Groves, Provost

but p
